CATALOG MULTIHULL SAILING YACHTS

Introduction:

This catalog is an indication of possible models of multihull sail yachts. There are hundreds of makes and sizes. This selection has been made to give you an idea of what exists and is possible. Once you have chosen a certain type of model and size we can also, on demand, look into other makes and their nearby sizes.

A small word about multihull sail yachts

While monohulls are the classic type, multihulls are becoming more common as a cruising boat.

The biggest reasons are stability and space. Multihulls have a more stable surface and don't roll from one side to the other like monohulls, making it more stable and comfortable.

Basically there are 2 types of multihull. The catamaran (double hull) is the most common in this class. The trimaran (triple hull) is less common as a cruising boat. The reason for this is space. A trimaran is basically a monohull with 2 floaters attached to it. Those hulls are too small to use as living space and therefore usually empty. They are mainly used in racing. Cruising trimarans are usually of the smaller sportive type.

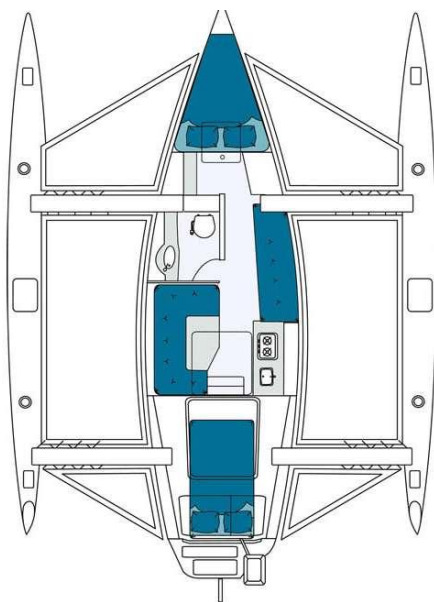

Another big difference with the monohull is that multihulls are faster due to their tunnel(s) between the hulls. An air cushion builds up underneath the tunnel and lifts the boat, reducing drag making a faster boat.

For cruising, catamarans are the most common due to having more space per length measurement than other types of boats. The reason is it's rectangular shape and both hulls being big enough to hold cabins.
